Maximo Value Pack

Why settle for standard Maximo when you can turbo charge your system with the most useful and popular tools, widgets and utilities we have provided our customers over the last 2 decades?

- **Status Progress Map:** A visual component that can be added on the header of any application and can be configured to show the status flow and the current/past/future statuses to finalize the process.
- **Workflow Progress Map:** A visual component that can be added on the header any application and can be configured to show all the WF history in a visual display. It can be auto generated from the WF designer but it needs some manual adjustment.
- **Line / Bar Charts:** A configurable component that can be used in any application to visually represent the data. For example, in asset application, the asset meter reading can be represented in a line chart over specific period of time.
- **Dynamic Report Generation:** A utility allows users to link a dynamic report with a system action, when the action is executed through a front end action or an escalation or WF the report is generated for that specific record and sent as an attachment via email, one example is PO approval, when PO is approved a signed Purchase Order is generated and sent to the supplier for his acknowledgment.
- **Download all Attachments:** as described, this feature makes quick work of transferring multiple attached documents from any Maximo record in one go.
- **Two Factor Authentication:** Increase security at login with 2 factor authentication.
- **Inbox Assignments searchable:** For those customers relying heavily on workflow for day-to-day work, inboxes can often fill up to the point where they are unusable with the available.
